

CFB 27 Coaching Abilities – Player XP

Derived from `dynasty-tuning-binary.FTC` (CFB 27).

Talent values are identical in patch 2 and patch 3.

Source: `Talent` / `TalentDataInt`. Runtime: `Team.CoachTalentEffects`.

How stacking works

Each talent stores three tier values:

Field	Role
<code>Data</code>	Head coach
<code>OCData</code>	Offensive coordinator
<code>DCData</code>	Defensive coordinator

Staff contributions **add**, then apply once. They are not chained multipliers.

For position-split abilities, the coordinator that owns that side of the ball gets the larger tier (DC for DB/LB/DL; OC for QB/RB/WR-TE/OL/K-P). The off-side coordinator still contributes the smaller value when present.

Max stack = HC + OC + DC when all three trees own the ability.

Percent boosts apply as a single multiplier:

$$xp = xp * (100 + totalBoost) / 100$$

Flat XP bonuses add to the grant.

Player XP abilities

Ability	Effect	HC	OC	DC	Max stack
Everybody Eats	all XP gains	5%	2%	3%	10%
Put in Work	offseason training	5%	2%	3%	10%
Star Maker	starters gain XP	10%	2%	5%	17%
Whisperer	faster underclassmen progress	10%	2%	5%	17%
Field Study	in-game goal XP	5%	2%	3%	10%
Can't Stop, Won't Stop	per 3-game win streak	300 XP	100 XP	200 XP	600 XP
Max Gains	skill-group max	400 XP	400 XP	400 XP	flat
Let's Grow	player levels up	15 XP	15 XP	15 XP	flat
Grow Together	player levels up	7 XP	7 XP	7 XP	flat

OC/DC values swap by side of ball. Defense gets the larger DC tier; offense gets the larger OC tier. Numbers above show the defense-side OC/DC split for the percent abilities (Everybody Eats / Put in Work / Field Study: OC=2 DC=3; Star Maker / Whisperer: OC=2 DC=5; Can't Stop: OC=100 DC=200). Flip OC and DC for offense groups.

Examples

Everybody Eats on all three trees for QBs

Total = $5 + 3 + 2 = +10\%$. A 1000 XP grant becomes 1100.

Star Maker HC only for starters

Total = $+10\%$. A 1000 XP grant becomes 1100. Full staff stack (17%) becomes 1170.

Can't Stop HC + both coordinators

Total = $300 + 100 + 200 = +600 \text{ XP}$ flat per three-game win streak (not a percent).

Related: Gainz Getter (CEO)

Training_ChanceBoost_DevTrait = $+20$ (HC only; schema max is 20).

Readable FranTk formula:

```
chanceBoost = 100 + Training_ChanceBoost_DevTrait
increaseChance = increaseChance * chanceBoost / 100
```

So Gainz Getter is a **1.20x** relative multiplier on the player's computed dev-trait increase chance – not a flat +20 percentage points on the final roll in isolation, but +20 added into the 100-base chanceBoost scale.
