

Derived from `dynasty-tuning-binary.FTC` (CFB 27), Head Coach talent tree order.
Values identical in patch 2 and patch 3.

Source: `Talent / TalentDataInt / TalentDataTeamRelativeAbility`.

Runtime: `Team.CoachTalentEffects`.

Win-streak length: `PlayerXPBoostWinStreakGameCount` = 3.

How to read this guide

Trees are listed in **Head Coach unlock order**. Coordinators get trees 1–11 (no Program Builder / CEO).

Column	Meaning
CP	Coach Points to purchase
HC / OC / DC	Values from that staff role

Stacking: HC + OC + DC **add**, then apply once (not chained multipliers).

Position-split trees (Motivator through Talent Developer, except Scheme Guru): each ability is bought per position group (QB, RB/FB, WR/TE, OL, DL, LB, DB, K/P). Tables show the **offense-group** OC/DC split (matching OC larger).

Flip OC ↔ DC for defense groups. K/P sometimes follows the defense-side split in tuning — noted where it matters.

Percent XP: $xp = xp * (100 + totalBoost) / 100$

Flat XP: added to the grant.

Scheme Guru / composure gameplay abilities store `TalentDataInt` = 0. They do **not** expose a percent in `FranTk`. At runtime they write an integer tier (**0–7**) onto `Team.CoachTalentEffects` (`Offense_*` / `Defense_*` fields). What each tier means in gameplay (fatigue %, shed chance, etc.) is native code — see §6.

1. Motivator

Culture setter who is strong in player development

Archetype: Grow Together — 25 CP → **+7 XP** whenever a player levels up (HC/OC/DC all 7).

Ability	CP	HC	OC	DC	What it does
Extra Gear	15	Tough+2, Stam+2, Inj+2	see note	see note	rating boosts while talent owned
Hot Hand	20	0	0	0	stay Hot through timeouts / quarter / games
Put in Work	25	5%	3%	2%	offseason training XP
Locked In	30	0	0	0	start 4th quarter Hot in close games

Extra Gear matching coord ≈ Tough+1, Stam+2, Inj+1; off-side ≈ Tough+0, Stam+1, Inj+0 (defense flips).

K/P costs are lower for Hot Hand (10) / Locked In (15).

2. Tactician

Puts players in position to succeed on gameday

Archetype: Winner — 25 CP → **+450 coach XP per win** (HC/OC/DC all 450).

Each position branch has four **20 CP** rating-boost nodes (`TeamAbilityBoost`). Typical pattern: **HC +2 / matching coord +2 / off-side +1** (K/P uses +1 across the board).

Ability	HC / OC / DC
K/P Rating Boost 1–2	Kick Accuracy +1

6. Scheme Guru

A master of the chess game

Archetype: Winners Win — 15 CP → **+900 coach XP per win** (HC/OC/DC all 900).

Scheme branches are **not** position-split. Abilities cost **30 CP**.

Why there are no hard percentages here

Unlike XP / recruiting talents (where HC/OC/DC are readable ints like 5% or +100), every Scheme Guru gameplay node stores **TalentDataInt = 0** for HC, OC, and DC. FranTk does not contain "Battery Pack = -X% fatigue."

What *is* readable:

1. **Effect field** — which `CoachTalentEffects` meter the ability hits (e.g. `Offense_ReducedTeamFatigue`).
2. **Runtime tier** — owning the ability updates that meter on `Team.CoachTalentEffects` to an integer **0–7** (schema max). Live saves show tiers commonly at **1 / 2 / 4**, sometimes stacked up to **7** when staff share related effects.

3. **UI copy** — “slightly” vs “significantly” pairs use **different** meters (e.g. `Offense_HFAProtect` vs `Offense_HFAProtect2`), not a larger int on the same talent.
4. **Shared meters** — some abilities write the **same** field (e.g. Cardio Kings and He Shed both use `Defense_DLineWinChance`), so they can stack on one tier.

What is **not** in tuning: the conversion from tier → in-game magnitude. That mapping is native. Getting real percents needs binary RE or controlled A/B tests.

Tables below list each ability with its effect meter and the in-game description.

Caveats

1. Talent definitions unchanged patch 2 → patch 3.
2. Program Builder and CEO are **HC-only**; coordinators stop at Visionary.
3. Scheme Guru gameplay abilities store `TalentDataInt = 0`. They update `CoachTalentEffects` tiers (0–7); FranTk does not expose the tier → gameplay magnitude. Motivator composure nodes (Hot Hand, Locked In, Icy Veins, Gasoline) are the same pattern.
4. Program Builder HFA abilities (`Home Field Advantage`, etc.) are different: those use 0–100 fields with readable talent values (e.g. **10**).
5. Some `Talent` rows exist in tuning but are **not** on any `OrderedTalentNodeList` (e.g. Cross train, Film Junkies, Reach Your Potential, Legacy) — omitted here.
6. Deeper recruiting baselines: `docs/coaching-abilities-recruiting.md`, `docs/recruiting-tunables-math.md`. Offseason XP math: `docs/player-xp-levels-devtraits.md`.
